

Global Leadership Program for Social Design and Management

GSDM2.0 is one of the University-wide Education Programs at UTokyo. It aims to provide students with an array of ability and skills, namely: the ability to discover and formulate issues, to situate specialized areas of expertise within broader contexts, as well as to design integrated solutions while collaborating with various stakeholders to implement them. On the basis of those abilities, the program trains the students to become global leaders. Student-led research projects will give you an opportunity to build and expand your human-network throughout UTokyo.

Each **University-Wide Education Program** has a set of lectures offered by multiple educational departments according to its own theme. Students who have completed the prescribed requirement for each program will be issued a certificate at the time of master degree or doctoral degree completion.
